

# Sharks & Their Kin

As you tour the Aquarium, be on the lookout for these aquatic residents. Notice how they move through the water. Do they use their pectoral fins(side)or their tail fin? Which one is your favorite and why?

## Zebra Shark

Zebra shark pups are black & white striped, but adults are tan with black spots.

## Spotted Eagle Ray

As the eagle ray grows into mature adulthood, its spots turn into rings.

## Chain Dogfish

These sharks only grow to about 18 inches. Did you know over 50% of shark species are less than 3 feet?

## Nurse Shark

These sharks use their tiny teeth and strong jaws to crush clams & lobsters.

## Sandbar Shark

This is the most common shark found in the Chesapeake Bay.

## Sand Tiger Shark

These sharks gulp air from the surface to help them stay buoyant and motionless.

## Cownose Ray

These rays migrate in large groups called "fevers."

## Southern Stingray

The female ray grows to 5 feet across while the male only grows to 2 feet across.

## Atlantic Stingray

This stingray can tolerate both salt and freshwater.
